

WE PROTECT IT

Without compromises. Because it is all about your IT security.

We protect IT

WE PROTECT IT

We realize efficient, highly available and secure IT infrastructures for you

The “digital transformation” is unstoppable. Yet today, business and private activities are unimaginable without all round available IT. The increasing dependency on digital applications and IT-supported processes requires professional IT infrastructures – the core competency and passion of the DATA CENTER GROUP.

Besides traditional risks and events of force majeure, there are planned targeted attacks on vital business data by “external interested parties” every day. The danger of internal data misuse by third parties has risen continuously in recent years. Benefited by increasing digitalisation in all sectors, external unauthorized access to data is now a real threat.

The DATA CENTER GROUP counters this development and convinces with long-term experiences and know-how in the realization of highly available IT security solutions like IT security rooms, modular data centers, outdoor containers or mini data centers. Our experts in the fields of energy supply, cooling solutions and any kind of security technology ensure a perfect coordination of efficiency, availability, a fully secure and reliable IT infrastructure.

Furthermore we are the right partner for IT managers concerning the certification of data centers and the implementation of IT management systems. We offer our comprehensive know-how in the fields of strategy, security and efficiency. In this way, we guarantee a fully integrated consulting concept covering your complete IT.

On top of that, the DATA CENTER GROUP gladly takes full responsibility for the professional operation of your IT infrastructure systems. We guarantee contractually regulated availabilities and fixed operational costs.

Our portfolio is complemented by a professional monitoring and service concept. With this IT environment, efficient, sustainable and economic operations for any kind of IT locations are ensured.

YOUR BENEFIT:

Consultancy – Planning – Realization – Services – Operation
Everything from a single source – for sustainable,
secure data centers.

Efficient – Professional – Economic

DATA CENTER GROUP

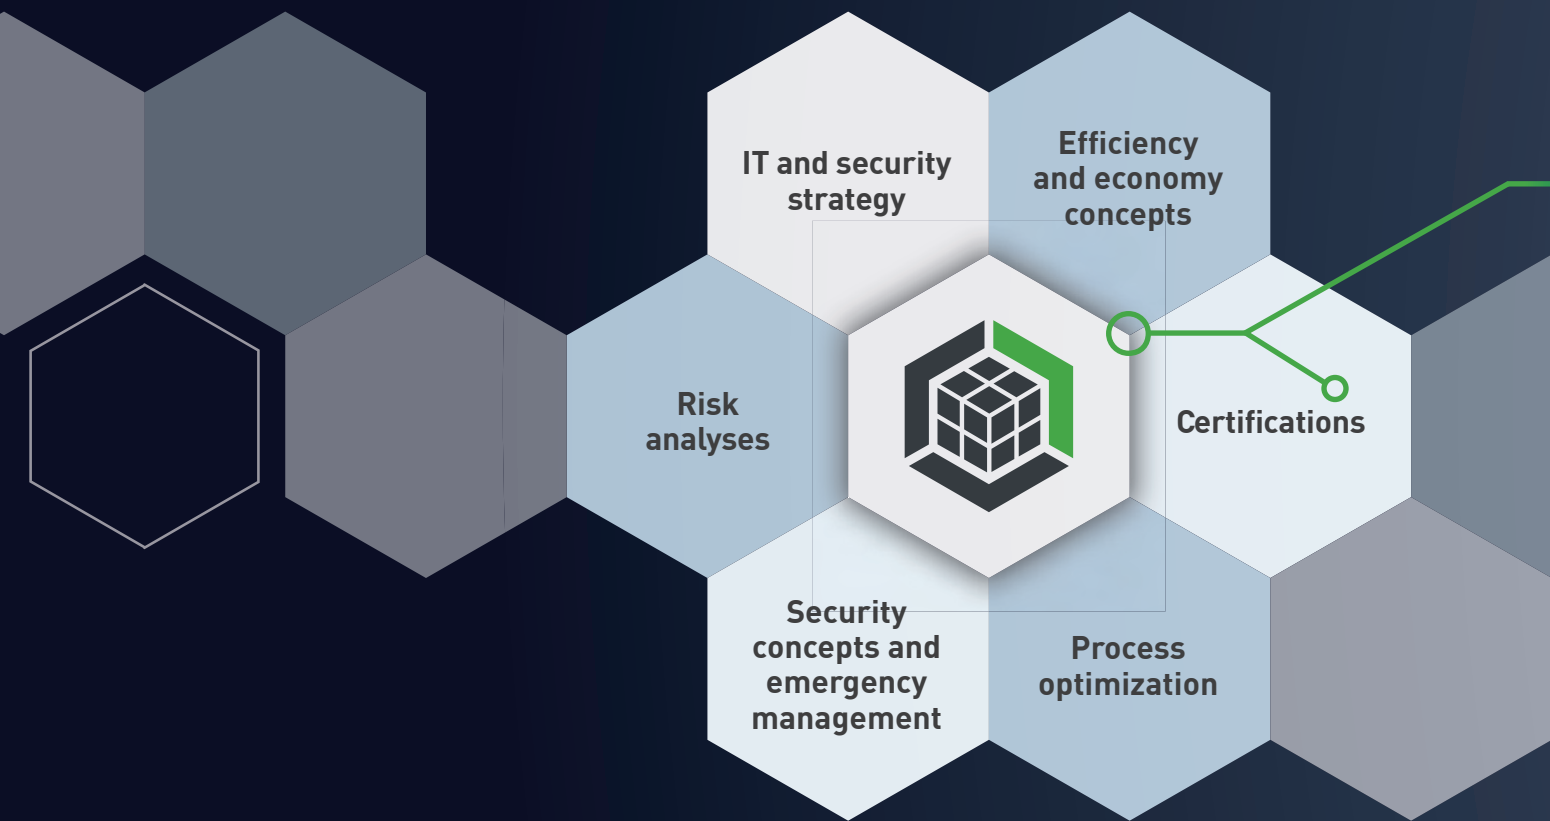

IT-Security is our passion!

With our five business units the DATA CENTER GROUP bundles all competences for the high availability, security and economy of your IT under one roof.

From consulting to planning and professional realization, the comprehensive support and services right through the professional operation of data centers.

For achieving this objective, all five business units of the DATA CENTER GROUP cooperate closely. With a permanent transfer of know-how, coupled with short distances and complex know-how, we succeeded to generate an immense added value in the market.

BUNDLED COMPETENCES UNDER ONE ROOF

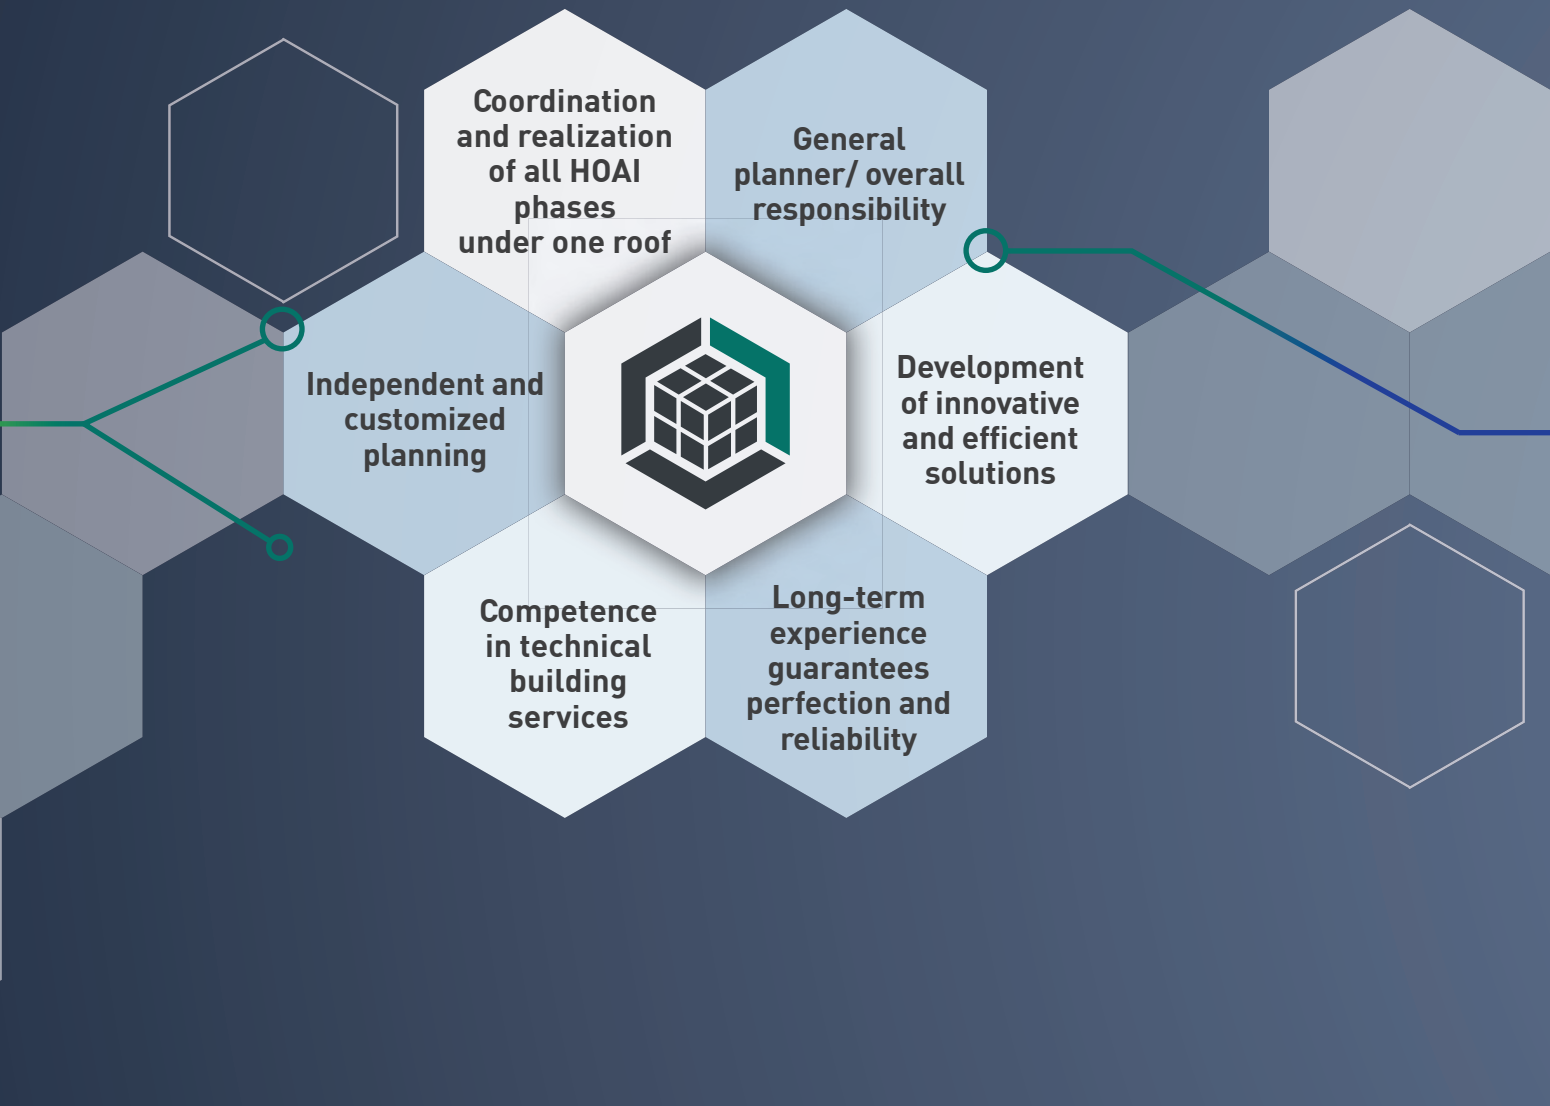

SECURisk

» Strategy, security and efficiency

Every company has its own DNA. It is the competence and passion of SECURisk to make your business data all-round secure and thereby to create the prerequisites for efficient operations. The **comprehensive consulting** is based on three key areas for objective investment decisions: **Strategy, security and efficiency**. It is our aim to prepare your IT infrastructure to the future, to minimize possible risks and to improve the efficiency.

The interdisciplinary team of experts in the fields of security, business processes, IT and economy offers **certified security** and high availability of your data.

RZingcon

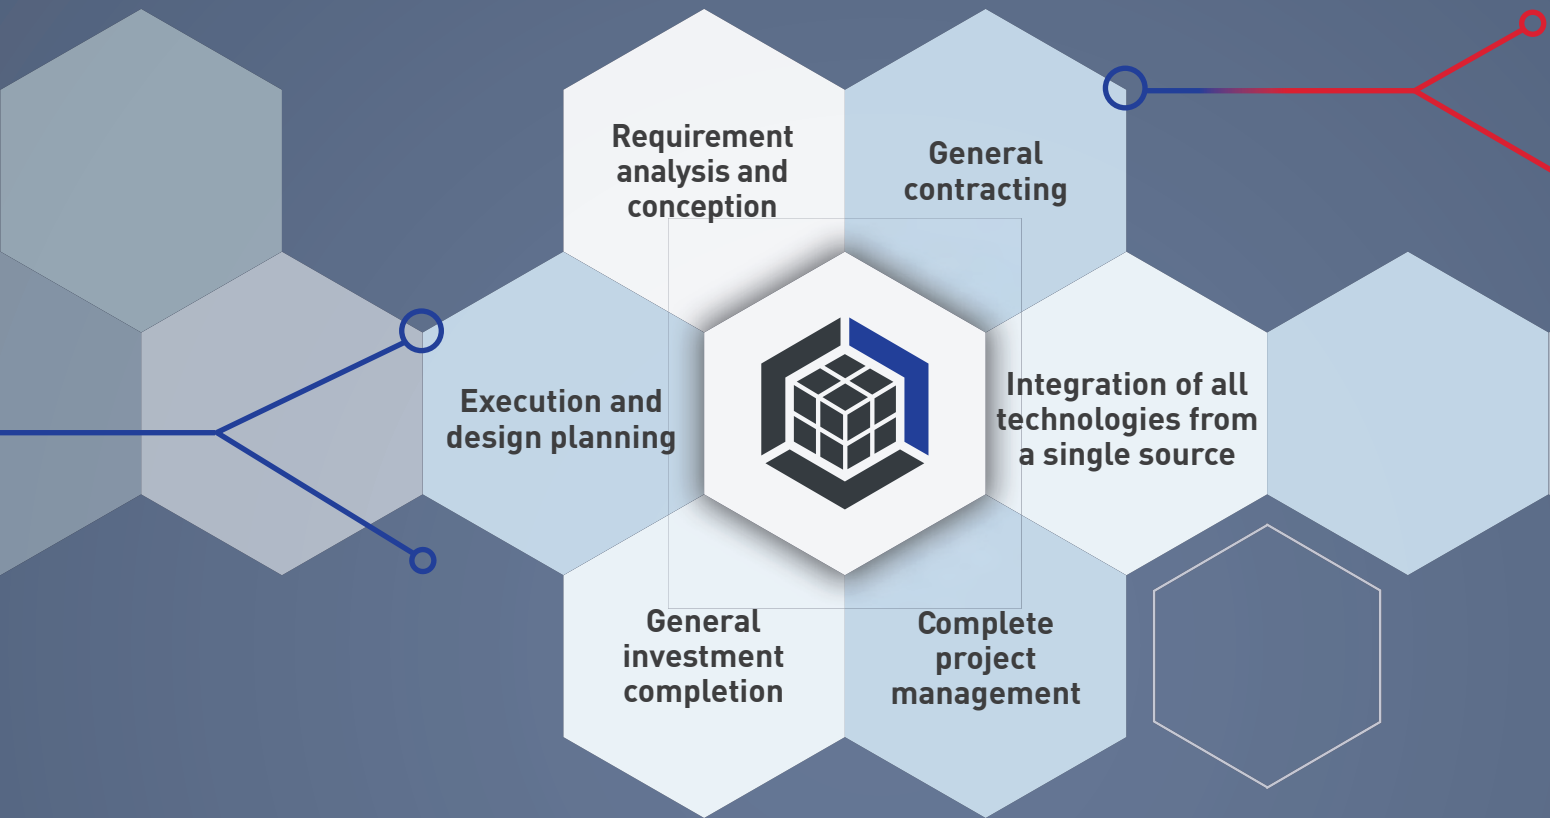

» Competent planning and professional IT architecture

RZingcon plans general or partial designs of your data center by implementing secure and operational architecture and IT supply technologies.

As independent planner, specialized in sophisticated IT infrastructure, we are focussing on the architecture of energy efficient data centers and technical building services.

This is based on German **HOAI** planning regulations and related current planning standards according to **BSI, BITKOM** and relevant normative standards, e. g. the new **DIN EN 50600**.

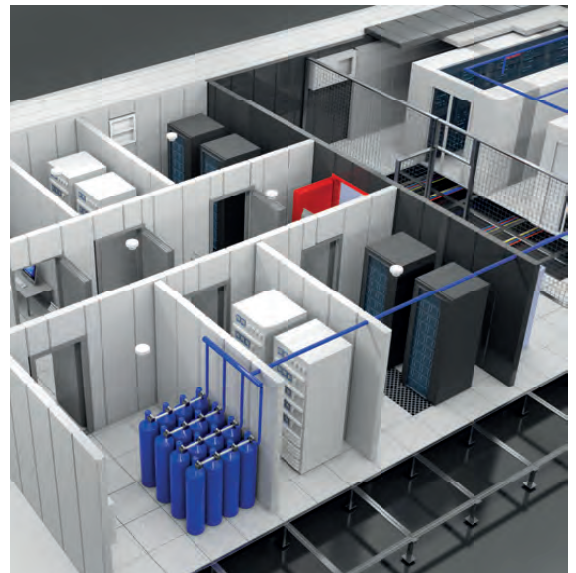

proRZ

» Professional data center constructions

proRZ – the synonym for highly professional and independent realization of data center projects as general contractor. The projects are realized according to the highest demands for security, availability and economy of IT infrastructures of any size.

With the experience acquired in more than **1,000 realized projects** and the interdisciplinary competence of planning and realization enable short realization phases taking individual needs and design requirements into account.

RZproducts

Development and production of IT security products

RZproducts is specialised in developing and producing as well as the distribution of high-end products in the IT infrastructure sector. New technologies, changing market conditions and structures create high demands to the security of your company's IT. State-of-the-art, high-tech products of the brand RZproducts with all protective features for the security and availability of your company's IT are the solution.

With **active cooperation in expert committees** and associations like ESSA (European Security Systems Association) e.V., BITKOM or eco, RZproducts supports the definition and compliance of European standards. RZproducts solutions are **"Made in Germany"**.

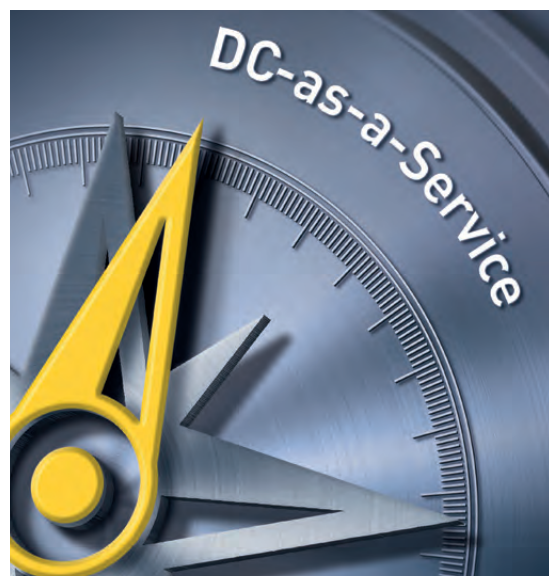

RZservices

Operating performances and services for professional data centers

RZservices supports data center operators to meet the continuously increasing statutory and regulatory requirements, as well as the individual requirements of IT operations. Therefore, RZservices' portfolio „DC-as-a-Service“ offers a range of classic, individual and flexible models, which covers **maintenance services and further services** from single tasks up to the entire data center infrastructure. These are realized by a team of competent and certified experts.

With this know-how a qualified **service and support management** as essential component of your economic and future-oriented data center is guaranteed.
