

FIT for Business

How fit is your IT infrastructure?

We make you fit. Thus your IT infrastructure will be able to support your business securely and efficiently even tomorrow.

SECURisk works out concepts to protect your company's IT.

When it comes to information you should not leave it to chance. These days, every company and every organisation extremely depends on information systems and available infrastructures. Besides, data protection and data security also play an increasing roll in legislation. Considerable data volume is stored and essential work processes are electronically controlled. Regardless of the company size, data as well as software and hardware form the foundation of your success. It is necessary to protect systems and processes for example against unwanted access or impact from outside, downtimes and data loss. On the other hand it is important to adapt the individual components to your requirements and business goals.

It is our job to point out the best options to protect, optimise and increase the efficiency of your company's IT because your fITness is our passion.

At request we are able to support you during the realisation. We are convinced that there is an ideal and individual data center concept for every company. We work out this concept for and with you by exactly coordinating the most important components on the basis of a detailed analysis. Our services are oriented towards companies, authorities and organisations of all sizes. And of course also those having very special requirements for data management, data storage and data security.

The SECURisk fITness components are based on strategy, security and efficiency.

Do I possess the required certification?

How high is my energy consumption?

How secure and efficient is my IT?

Did I really take everything into consideration?

FITness CHECK

Analysis

At this point it is our goal to recognise and to assess factors affecting the IT's strategic orientation. The usage of professional analysis tools enables us to set up an independent and objective picture of the infrastructure that can serve as the basis for future decisions.

Consulting

To offer the best concept we independently and objectively analyse, recognise and assess risks and potentials. Our SECURISK specialists consult you to ensure your company's security and persistence in the market on a long-term basis.

Workshop

The aim is to determine customised and environment-specific demands including a feasibility test and a classification of the availability requirement. Workshops build the foundation for the coordination of the IT's actual and desired state.

FITness CHECK

Agile and self-determined work out of data center solutions regarding security, Standard compliance and energy efficiency.

Data centers have to fulfil new and more and more increasing demands like higher performance, more security, bigger reserves and higher efficiency. We can show you the best way for your infrastructure.

„The success of the SECURisk consultants is based on their passion and dedication to the requirements of the customers. Each staff member is a real specialist in their field of competence. We feel confident of the knowledge of the company, and place importance on a long-term companionship with Data Center Group for the optimisation of our strategy and security.“

Kai Wenzke | Head of Department Data Center | QITS GmbH

Strategy

Combining passion with competence makes it possible for us to develop the optimal strategy to protect your business data and to set the course for an efficient operation consuming less energy.

This is the only way to use information technology in a target-oriented and economical manner thus the right strategy is required here. We analyse your company's current IT infrastructure to determine whether it is consistent with your work processes, business goals and visions. By offering well-founded support our specialists help you to make decisions for the IT's strategic orientation and to determine and evaluate the most important factors.

Our expert team supports you to make decisions regarding the IT's strategic orientation on a well-founded basis and to recognise and assess the most important influencing factors. Depending on the needs we execute for example make or buy studies, compile market analyses and develop outsourcing strategies. Based on the analysis results we develop a target-oriented action strategy tailored to current and future requirements which gets the best out of your company's IT.

Strategy elements:

- **DC risk analysis (infrastructure check)**
- **DC initial workshop**
- **DC strategy document**
- **DC (rough) concept**
- **DC location assessment**
- **DC feasibility study**

SECURisk compiles concepts for and with you applying to your company and to current Standards as well as to company-specific and legal demands. We check and

assess for example your locations and current technical equipment to give you an overview of the status of your IT infrastructure and security.

„The competent consultation with SECURisk with regard to the future orientation of our IT and data center strategy was the first important cornerstone for more efficiency and economic viability of our whole infrastructure.“

Stefan Nitsche | Area Manager Energy Industry | Information technology of Stadtwerke Speyer

How fit is your IT strategy?

Does your IT strategy work in harmony with your business risk analysis?
Is the storage of your data energetic and efficient?
In which areas would you like to achieve a certification and is this even possible?

SECURisk responds to essential questions regarding IT and information security and accompanies you all through the realisation of the jointly developed strategy.

Documentation

Manuals are the lifeblood when it comes to management systems and their certification. They are also essential to provide fast IT resumption in case of emergency.

No matter whether it is about TÜV, ISO 27001 or IT-Grundschutz: our consultants compile a documentation of the IT environment with focus on data center infrastructures or server / plant rooms for a highly available and efficient data center operation. No matter whether it is about operation

and maintenance or IT resumption in case of crises and emergencies, manuals for business management or emergency management and a security concept form the foundation for a structured, efficient procedure and for the prevention of financial losses.

The documentation components:

- DC workshop business management and emergency management
- DC business management manual
- DC emergency manual
- DC requirement specification
- DC security concept

How fit is your documentation management?

Are your employees aware of their tasks and authorisations in case of crisis?
Is there a documentation of the entire IT infrastructure including dependencies?
Does the IT document your processes, structures and procedures?

SECURisk analyses and documents the actual and desired state of the IT infrastructure and thus minimises company risks and liability risks for the management and head of IT.

Infrastructure

In the age of digitisation reliable data security is an essential component to create a company's best possible IT infrastructure.

We set the framework for the security level and the availability of the infrastructures by providing you with an enhanced security strategy tailor-made to your business activities. Because anyone can be affected by data loss no matter whether due to defects, theft, force majeure or human failure. Based on our experts'

experience of many years they work out long-term strategies to ensure your data is secure and available and that defined goals, e. g. certifications, can be achieved.

Infrastructure components:

- **DC workshop/infrastructure analysis***
- ***DC companionship for certification* based on ISO/IEC 27001/IT-Grundschutz (BSI system component INF.1-4 (basic protection compendium) respectively measures 11 „physical und environmental security“**
- **DC workshop TÜV certifications**
- **DC companionship for TÜV certification**
- **DC workshop EN 50600**
- **DC companionship for certification (respectively Standard compliance) according to DIN EN 50600**

Your aim is to substantiate the infrastructure security with a certification? Or would you like to adjust your plans to these Standards? In that case our consultants

equipped with the required know how can support you to achieve your goals. And of course we can train your employees.

How fit is your IT infrastructure?

Are you aware of the present Standards' technical demands and do your current processes comply with them?

Do you know your infrastructure's technical status?

Do you know whether changes are possible or even required?

SECURisk analyses the actual and the desired state of the IT infrastructure and helps you to establish Standard compliance.

We work out your individual emergency management. Find more details on our website or give us a phone call.

We support you if you would like to get certified according to ISO/IEC 27001 or BSI IT-Grundschutz.

Efficiency

Resources are limited. The better their use is planned, the more efficiently the IT infrastructure works. Therefore we find weak points, localise hidden potential and accompany you during certification.

You take care of your data center's energy consumption and efficiency? Environment and climate protection are important topics to you? We assess the technical equipment of your facilities and optimize the existing

infrastructures. Our energy team creates a concept applying to your demands and needs. Thus we make your IT infrastructure fit for the future.

Energy components:

- DC energy check
- DC energy efficiency check
- DC energy efficiency concept
- DC workshop energy management system (EMS) according to ISO 50001
- DC companionship for certification according to EMS ISO 50001
- DC EMR (Energy Management Representative)
- DC basic workshop „Blue Angel for energy efficient data center operation“
- DC companionship for Blue Angel (RAL-UZ 161) certification

Our experts with many years of practical experience in each field of competence are at your disposal during our customised workshops. We offer well-founded seminars as in-house events. There are certain topics

you would like to pay extra attention to? No problem. We adapt our agenda according to your individual needs and pick the most specialised consultants from our team. Thus you receive a tailor-made workshop.

How fit is your energy management?

What is the status of your energy consumption?
What chances do you have to optimize your energy requirement?
What aids are available?

SECURisk analyses and optimises your energy consumption, supports the implementation of an energy management system and also offers support during audits and certification processes.

From analysis to certification, we realise and optimise your data center as well.

One for all. You can obtain the extensive range of services for comprehensive IT protection from the DATA CENTER GROUP.

DATA CENTER GROUP bundles the complete competence for the security of your IT under one roof. From consulting and planning to correct structural implementation and extensive support and service, right up to professional operation of the data center.

To achieve this goal, the five companies in DATA CENTER GROUP work closely together and in coordination with each other. With a permanent transfer of know-how, coupled with short distances and complex know-how, we succeeded to generate an immense added value in the market.

Apart from SECURISK **proRZ** is also available to our customers for the realisation, optimisation and construction of data centers of all sizes.

RZingcon is responsible for the architecture and overall general or partial planning (even on a HOAI basis) of data centers or high-tech building equipment, within DATA CENTER GROUP.

In order to comply with executives' requirements for the availability FIT systems, **RZproducts** produces unique products with an immense added value for the IT infrastructures of our customers, e.g. security rooms/safes and effective monitoring systems for supervision of IT components and control of energy efficiency.

The range of DATA CENTER GROUP is completed by the services of **RZservices**.

Professional maintenance and repairs by qualified and certified specialists combined with customer-oriented alarm and energy management guarantee high availability and cost-efficient IT operations. The service portfolio is completed by highly professional operational concepts for customers who want an in-house service provider.

The advantage for our customers: one single contact person for economical and efficient realisation and operations of the data center operation.

There five affiliates of DATA CENTER GROUP have one thing in common: we want what is most secure and economical – i.e. the best possible IT infrastructure for our customers. It is our highest claim that we comply with individual requirements, and to generate real added value for our customers in the long term.

We protect IT.
